

PRE-SURGICAL ANESTHESIA CONSENT FORM

_____ will be undergoing _____ using anesthesia today. Our greatest concern is for the health and well being of your pet. In order to provide the safest anesthetic event for your pet, we will perform a full exam and all patients will have ECG, Oxygen/CO2, respiratory rate, and body temperature monitored throughout the procedure. In addition, we **require** a pre-anesthetic blood profile to ensure your pet is in a low risk category. State-of-the-art technology allows us to run safe, accurate blood chemistries minutes before anesthetic induction. These results will also give us base line values in the event your pet ever becomes sick in the future.

- **PROFILE 1 PETS YOUNGER THAN 2 YEARS OLD***
CBC (infection) PCV (anemia) Blood Clotting Time
- **PROFILE 2 PETS 2 TO 5 YEARS OLD***
Includes all tests in Profile 1, plus:
ALKP (liver) ALT (liver) BUN (kidneys)
Glucose (sugar level) Creatinine (kidneys) TPhydration/immunestatus)
- **PROFILE 3 PETS OVER 5 YEARS OLD (OR SICK PET REQUIRING SURGERY)**
Includes all tests in Profiles 1 and 2, plus: Phosphorous (kidney) Amylase (pancreas)
Bilirubin (liver/gall bladder) Calcium ALB (protein) Lipase (pancreas)

*If you would like additional blood work performed for your pet, **beyond its age requirement** please fill in the blank with the desired profile: _____

PLEASE NOTE: Blood work is a requirement for all pets undergoing an anesthetic procedure. Unless otherwise noted, we will perform the age appropriate profile on your pet prior to anesthetic induction.

**ADDITIONAL PROCEDURES**

- |                                 |                              |
|---------------------------------|------------------------------|
| _____ Nail Trim (complimentary) | _____ Avid Microchip Implant |
| _____ Clean Ears                | _____ Anal Gland Expression  |
| _____ Surgical/Intraop Fluids   | _____ FeLV/FIV test          |

~~~~~  
PAIN MANAGEMENT PROTOCOL

Our goal is to keep your pet as comfortable as possible during and after a surgical procedure. Therefore, all surgeries that may induce pain are **required** to be accompanied with medication to control the pain. The minimum requirements for most surgical procedures are as follows:

- 1 dose given by injection while pet is in the hospital
- 2-3 days of oral medication sent home with the pet to be given by the owner.

PLEASE NOTE: If additional medication is needed, we will administer and/or send home accordingly as determined by the veterinarian.

~~~~~  
I realize and accept that there are risks involved with general anesthesia and I hereby certify that I have read and fully understand the above authorization form for the above mentioned medical/surgical procedure.
